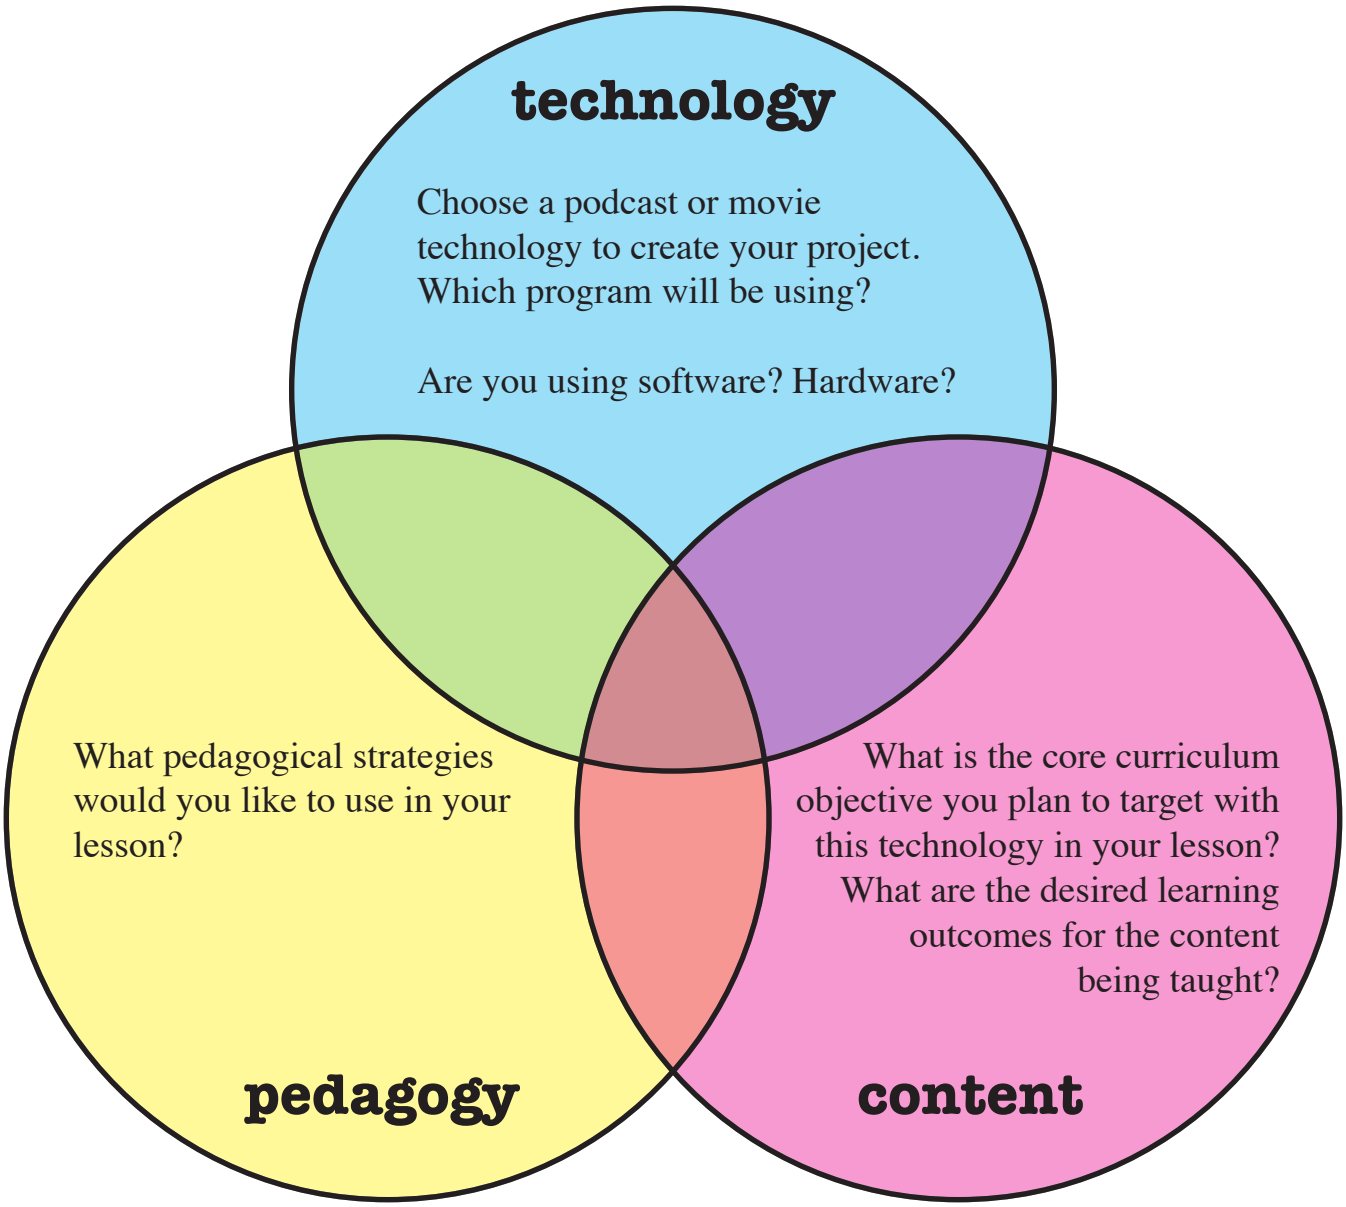
Effective Technology Worksheet

Answer the following questions on a separate page



Here are some example pedagogical strategies:

Active engagement
Connection to real world contexts
Visualization
Practice and feedback
Reflection
Group Work

Please include the objective's number and text as it appears in that State Core Curriculum

(if you don't know, go to uen.org to find an objective from the state core curriculum in your subject matter)

Is it effective? How effectively does the technology integration enhance or support the pedagogical strategies being used?

How does the technology integration improve or detract from the learning experience?

4 Principles of Effective Technology Integration

1. Effective technology integration typically involves students (as opposed to just the teacher) in actively using the technology. How can your movie be used to involve the students in more than just observation?

2. Effective technology integration is essential not peripheral to the learning activity. How is your movie essential to the learning activity?

3. Effective technology integration focuses on the learning task and not the technology. What are the students learning other than iMovie or Movie Maker?

4. Effective technology integration facilitates learning activities that would be more difficult or impossible without the technology. How does your movie facilitate a learning activity that would be more difficult to teach without technology?
